

SYSTEM AND METHOD FOR WIRELESS PROJECTION

ABSTRACT

5 A wireless projection system includes at least a wireless projector box and at least one user end computer. The user end computer consists of at least an input module, a first storage module, a coding module, an user datagram protocol transmission module, a first buffer, a first radio receiving/transmission module, and a first processing module. The wireless projector box includes a server end computer and a projector module linking to the server end computer. The server end computer consists
10 of at least a second radio receiving/transmission module, a second buffer, an user datagram protocol receiving module, a decoding module, and a second processing module. Each user end computer may transmit signals to the server send computer in a wireless linking fashion.
